

25X1 1. Oranienburg (N 53/Z 67) airfield was observed between 1 and
4 p.m. on 5 June 1950. The weather was fair but there was
25X1 no flying. Aircraft were not standing on the field or in
the open hangars. Motor vehicle traffic was not observed. *

2. A small motor vehicle that controls the take-off of the air-
planes was seen in the northwestern corner of the field. A
radio truck with an extended rod antenna was in the southwestern
corner and a tank truck [] was in the south-
eastern corner. An underground installation was also in the
southeastern corner of the field. Two similar installations,
presumably fuel dumps, were on the eastern edge of the field.**

25X1 * [] comment. First report that no planes were on the landing
field. A transfer of the fighter regiment previously stationed
there has not been reported. The unit was last observed in
Oranienburg on 23 June 1950.

25X1 ** [] comment. The installations, reported for the first time,
are presumably fuel or ammunition dumps. []
